RTM Shower Bases

Pioneering Innovation in Bathware

RTM (Resin Transfer Molding) technology brings high performance and unmatched durability to the bathware space. The RTM shower base line establishes Florestone as an industry pioneer, advancing the products we sell by introducing new models, sizes and methods of construction that add real value and longevity.

RTM Technology

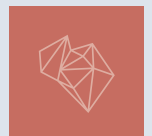

RTM takes the well-known components of shower manufacturing and combines them in a next-level, closed-mold process that yields a truly solid structure with a beautifully consistent finish.

- AcrylX™ applied acrylic surface material is layered with a proprietary composite reinforcement matrix within a sealed shower base mold.
- Resin is introduced into the mold cavity as air is removed, ensuring that every inch of the composite matrix in the mold is saturated.
- The surface finish and reinforcement layers chemically bond and cure to create a solid shower base with no air pockets to delaminate or separate.

THE EDGE

A Florestone Innovation

Featured on Florestone's RTM and Saflor shower bases, The Edge is a patented threshold design that addresses the critical issue of water containment by keeping water inside the shower. This minimally visible but effective barrier functions as a "fourth flange," directing water away from the shower exterior and towards the drain.

RTM Shower Bases

Product Features

Strong & Rigid

Solidly reinforced throughout the part for a rock-solid foundation that will not flex or deflect

Breadth of Line

Available in an industry-leading selection of sizes, shapes and drain configurations

Consistent Finish

Close mold production ensures smooth, consistent finishes on all surfaces

Modern White Finish

Available in white only. Versatile and easy to pair with shower walls.

Coordinating Wall Solutions

Available in 60", 48" and 36" widths, Florestone 3-piece wall sets perfectly complement popular RTM and Saflor shower bases for a streamlined solution without the maintenance of tile and grout.
